

# Psychrometrics

An invaluable one day course to help you analyze,  
calculate and find solutions

## Course Description

This course introduces psychrometrics, the study of the air and water vapor mixture.

A knowledge of psychrometrics is necessary to enable calculation of heating and cooling loads, design air-conditioning systems, select equipment and analyze related problems.

The course introduces the psychrometric chart, a valuable tool for system designers, field service personnel and facilities managers. Delegates will use the psychrometric chart to plot air-conditioning processes and perform calculations.

## Course Objectives

On completion of this course delegates will be able to read and understand a psychrometric chart, plot air conditioning processes on it and perform calculations. Delegates will also be introduced to psychrometric software.

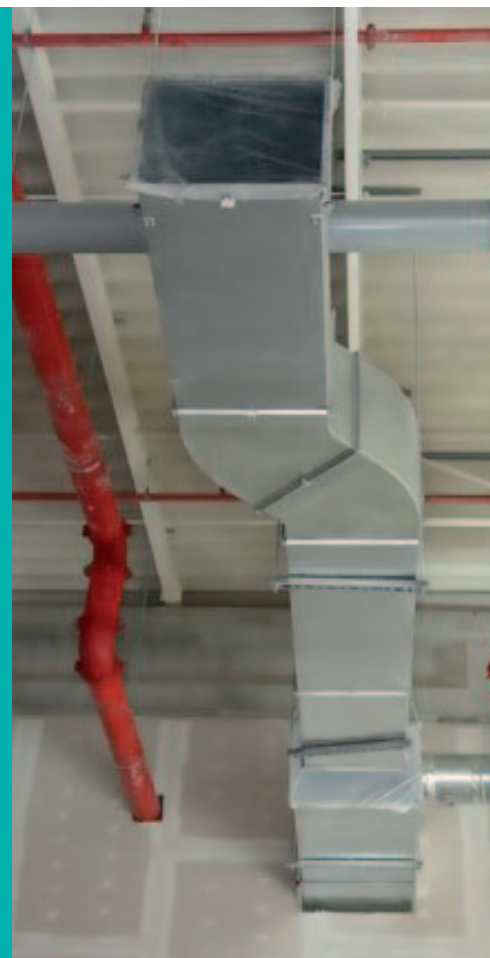

## Who should attend

Recommended course for anyone who owns, operates or specifies air conditioning equipment, including end-users, field service technicians, engineers, facilities managers, consulting engineers etc.

## Course duration: One day

### Course Rates:

Founding & Corporate Members	AED 1,800
Associate Members	AED 2,200
Non Members	AED 2,500
